# HydroFlow protects your home from limescale with radio waves

## HOME - HOW IT WORKS

HydroFlow uses patented ferrite technology to implant a random electric field with radio waves in the water, in any kind of pipe. This causes the formation of microscopic crystals, which provide a nucleation point for the natural salts and prevent the formation of **limescale** and release carbon dioxide to dissolve existing scale. HydroFlow uses only **1.2 watts** of electricity.

There is a "skin effect" that pushes the electrons outside the pipe to prevent **corrosion**. The calcite crystals attract the particles that would otherwise adhere to **chlorine**, to minimise chloramines. HydroFlow treated water has less chlorine aftertaste, and helps sensitive skin and eczema. The Super 38 and J62 cause a natural osmosis that kills **bacteria** and algae.

- ✓ Stops limescale, corrosion, bacteria and algae
- ✓ Reduces your electricity bill
- ✓ Water heater lasts longer
- ✓ Less taste of chlorine in water
- ✓ Good for sensitive skin
- ✓ Long life, no maintenance
- ✓ Fit it and forget it!

## Buildings

HydroFlow is NOT an electro-magnet

## POOLS - HOW IT WORKS

AquaKlear kills **bacteria** and algae. The crystal clusters flocculate naturally and stop the particles in the water penetrating the sand filter. **Filtration** is much improved. The results are big savings through reduced water loss. You need fewer and shorter backwashes, which saves water. AquaKlear reduces chloramines, stops pool smells and you use **50% less chlorine**. There is much less chance of ear infections and skin irritation.

Cleaning is easier with no dirty marks on the water line. Without **limescale**, the pool pump and sweep last longer.

*Patented green technology that saves you money*

**Made & Guaranteed in Britain**
